LABORATORY METHOD CHANGE FOR 1,2,3-TRICHLOROPROPANE, TENTATIVE WASTE DISCHARGE REQUIREMENTS, EXETER DISPOSAL SITE, TULARE COUNTY

Tentative revised Waste Discharge Requirements (WDRs) and Monitoring and Reporting Program (MRP) for the Exeter Disposal Site were issued on 24 January 2019 for consideration at the 4/5 April 2019 board meeting. In the tentative MRP, the laboratory method for 1,2,3-Trichloropropane (1,2,3-TCP) was incorrectly listed under the USEPA Method 8260B. On 14 December 2017, a maximum contaminant level of 5 parts per trillion for 1,2,3-TCP became effective, which is lower than the method detection limit for the USEPA Method 8260B. As such, the laboratory method in the MRP will be changed to SRL-524M-TCP (see Table IV, page 19 and Table V, page 22 of the MRP) as it has been in other recently adopted MRPs for land disposal sites. Any comments or recommendations you may have concerning the tentative WDRs or MRP should be submitted to this office in writing by 5:00 p.m. on **25 February 2019**. If you have any questions, please call Kristen Gomes at (559) 445-5108 or email at kristen.gomes@waterboards.ca.gov.
